

Making operators and their environment safe

Manitou is committed to design machines that provide optimum safety for users.

Pedal presence in basket

Activation of the pedal presence is required to make any movement on the machine.

Basket overload and tilt sensor

Audible and visual indicators are provided if the basket is overloaded or in case of the slope is too important.

Double rail and meshed floor

They guarantee of operator protection and full visibility of the working environment.

Electric emergency pump

Enables efficient and rapid assistance.

Peace of mind

The battery is empty and you need to collect the machine from the site? Activate the safety mat and you can proceed to load the platform.

Have you thought about SPS?

(Secondary Protection System)

The SPS is a safety solution for the operator. It is activated in the event of a crush or discomfort of the operator. Its activation is multi-directional to guarantee optimal safety. Finally, the thickness of the cable allows the operator to have full visibility of the controls.

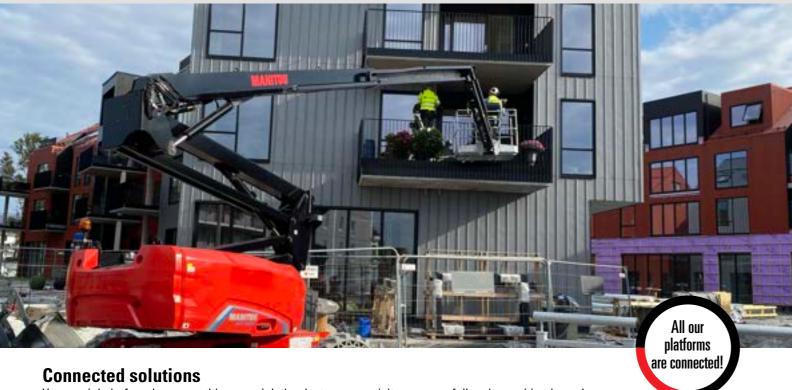

Access the Getting Started videos using the QR Code on the machine Reduce Risks helps you to use

your machines safely

Your aerial platform has something special: thanks to connectivity, you can follow its position in real time and optimise the operational follow-up of your equipment.

View in real time

Manage your fleet remotely and benefit from a wealth of information about your machines accessible on your PC, tablet or smartphone.

Anticipate maintenance

Save time: share your alerts directly with the technician to anticipate parts and reduce response time.

Analyse performance

View the performance of your machines in a graphical format that is easy to follow and interpret.

Protect your equipment and control access

As an option you can manage driving authorisations and control operator access to your machines to ensure their safety and that of the workplace.

Choosing an electric aerial work platform is a promise to reduce the overhead costs of your investment. A powerful, robust and cost-optimised machine.

How can I optimise the life of my battery*?

There are a few good practice rules to know in order to optimise the life of the batteries:

- Never discharge your batteries completely
 - Avoid partial charges
 - Perform maintenance charges
 - Check the water level regularly

Low maintenance

Reduced maintenance costs, thanks in particular to the reduction in the number of components.

Basket durability

With its galvanised finish, removable floor and protected control panel, you can rely on a basket designed to last.

Easy access to components

Quick access to hydraulic cables, hoses as well as the batteries thanks to fork pockets to easily handling batteries.

Reduced consumption

Its 100% electric power reduce your energy costs thanks to the low price of electricity compared to the price of diesel.

Optimisation of resale value

On resale, benefit from an unbeatable selling price thanks to a lower cumulative number of hours than a thermic model. Hour displayed = Hour worked.

Easy transport

One-point slinging without a spreader bar for safe transport.

Driving an ATJ-E has never been easier

Ergonomic and harmonised controls

Ergonomic and standardised basket and lower control station for the entire ATJ range.

Intuitive human/machine interface

A large colour screen displays information via an alert system. The operator knows the remaining autonomy of the machine (in hours).

Easy to charge

The integrated charger located on the turret allows you to easily recharge your machine using a standard 230V plug.

^{*} Visualise your battery data thanks to CAN feedback

Continuous rotation of the turret

simultaneous movements

maintenance-free asynchronous electric motors

wheel drive

Cost efficiency

a better durability in time and to avoid repainting (TCO). The removable floor damage.

Take advantage of a basket console fitted with a display to give you a range of useful information for your working day.

Simplicity

The 200 ATJ-E is a machine with an architecture of unparalleled

simplicity and reliability on the

market. Equipped with only two

electric motors well protected

low maintenance costs.

inside the machine; guaranteeing

The large screen at the lower control box offers additional information to the top control box for operator and allows technicians to carry out a quick diagnosis, consult the machine memory and many other functions.

Did you know?

Using a code, you can modify certain options to adapt the machine to the needs of your customers (flashing light on contact, flashing light on movement, all movement beep...).

Sustainability The market reference

Our customers praise the reinforced design and durability of our lifting solutions. Regardless of the product chosen, the articulation heights and working outreach set the standard in their category.

Super impact resistant cover

ATJE, a 20-metre

articulated boom lift,

100% electric.

The galvanization of our baskets allows allows for quick replacement in case of

Comfort of use

Turret rotation is via a hydraulic motor whose speed varies according to the extension of the telescope.

CLEARANCE

The off-road range

Our chassis are perfectly suited for off-road use. The design of the chassis, the high ground clearance and the active oscillating axle guarantee excellent handling on off-road terrain.

Optimal performance

Since its inception, Manitou has equipped its rough-terrain aerial work platforms with drive axles. These highly reliable components are perfectly suited to the toughest conditions and offer superior performance to other technologies.

Folded dimensions (LxWxH) from :

6.50 x 2.32 x 2.39

from: 6 220 kg

One-point slinging

Without a spreader bar for easy lifting of the machine.

Take a deep breath

Manitou introduces its Oxygen label. Introduces all Manitou solutions aimed at reducing environmental impact. It responds to new requests for «zero emission» projects, to support companies in internal policies aimed at reducing their carbon impact. Or even, to offer machines for applications in quiet areas.

100% Manitou DNA

Investing in a Manitou electric aerial work platform means enjoying the benefits of electric power and having a machine that is designed to work in rough conditions.

100% versatile

Technology and tyres fully adapted for indoor use. 4-wheel drive, oscillating axle and high ground clearance to adapt perfectly to the most difficult conditions.

Why lead batteries?

They have several advantages. Its low replacement cost compared to other types of battery technology and finally, its recyclability rate (98%) completes this product which is intended to be non-polluting!

> Our lead traction batteries have a lifetime of 1500 cycles*.

> > * 1 cycle = 1 charge

Does the number of electric motors affect the performance of the machine?

The number of electric motors is not related to the performance of the machine. More components often mean more maintenance and associated costs! To reduce these costs, we have designed a very simple machine with reliable technology. Only one motor in the chassis for translation movements and one motor in the turret for elevation movements.

A wide range of options

To access all the options, ask your Manitou partner for advice.

Lighting pack Seeing and being seen is essential for operator and machine safety

Range extender Extend the autonomy of the machine on a site without electricity

Biodegradable hydraulic oil Contributes to the protection and preservation of our environment

What is important as a fleet manager is the turnover rate. That's why I need a machine that is easy to maintain and that allows me to anticipate maintenance! All of this while meeting our safety regulations and being versatile enough to be rented anywhere.
